

The Department of the Air Force is currently conducting sampling of private drinking water wells for perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) as part of a sampling program related to Joint Base McGuire-Dix-Lakehurst (JB MDL) because some on-base groundwater locations on base were found to exceed EPA Health Advisory Levels (HALs) for these two compounds. JB MDL hand delivered informational packages and a well sampling permission form to residents in certain areas near the JB MDL boundary where they are seeking permission from property owners to sample their drinking water well. **There are currently no concerns for the Residents of North Hanover.** Additional information on this sampling program is available on the JB MDL web page: www.jointbasemdl.af.mil/PFCs.
